To Prepare for Sewing

in constant use oftice a day.

With all holes, before commencing to sew; and when the machine is

that provided

Oil the three cams and can rollers, the feed rolls on the top.

To Oil the Machine
THREADING. Turn up the upper roller in front of the needle.

After threading, turn up the eye of the needle with which to commence sewing. With the needle clamp, hold the tip of needle and downward through the eye of the needle, leaving about two inches of thread beyond the needle clamp. Above the rear notch of needle clamp, over the needle clamp, pass from the rear of the thread pool downward. Then thread should pass from the rear of the thread pool downward. The needle in order to give access to the needle. The needle should be threaded in front of the needle.

Before threading, turn down the upper roller in front of the needle.

(See Fig. 3, on the following page.)

Fig. 3. Threading the Needle (Machine 352)
To Thread theLooper for Machine 35-I

To Thread the Looper

Looper to strike the underside of needle. Needle will pass between it and the looper and still not allow the shank to enter through the eye of looper. The screw should be adjusted so that when the thread is pulled the shank will pass between the needle and the looper at least 1/8 inch. The screw is placed in the looper. Turning the screw inwardly raises the looper. Turning the screw outwardly carries the looper. Turning the screw inwardly raises the looper. Turning the screw outwardly raises the looper. The screw may be adjusted to bring the needle guard roller above the lower bracket in position and raise or lower the bracket, as may be required.

To Set the Looper

To Set the Looper

Eye of the needle to form a loop on the underside of the needle. When the needle is pulled through the eye of the looper, forming the thread downwardly through the upper side of the needle, the roller will drag that the outward stroke of the needle, the roller will drag the upper side of the needle. This will position the roller so required. To bring the needle guard roller above the lower bracket in position and raise or lower the bracket, as may be required, loosen the two screws which hold the needle guard roller.
Thread

1. Set Xo. 18 in the needle, and Xo. 25 in the looper.

Thread for another seam

When the machine is properly threaded and ready for applying to the upper roller up and remove the machine from the carpet and after which cut the thread about 7" from the eye of looper. Turn the needle about 4" of thread, thread above the eye of looper and draw or about 4" of thread, with the hooked end of needle gauge 8035, grasp the thread immediately below and of the needle gauge 8035. Grasp the thread to the rear of the needle lever and with the hook thread, thread above the eye of the needle and wind the excess thread through the eye, with the hand crank until the needle is withdrawn from the carpet.

To Set the Machine on the Carpet

desired. Then tighten the screw with the needle and adjust the needle to the depth of seam. With the machine on the carpet, turn down the upper roller. With the machine engaged with the needle, set the height of the needle.

To Regulate the Depth of Seam

Tensions

about two inches of thread with which to commence sewing.

Then pass the thread upwards through the eye of looper passing through the eyelet end and machine frame to the under side of looper.

through the eyelet and machine frame to the under side of looper:

The tension on the needle and looper threads should be

To Thread the Looper for Machine 35-2

The thread should pass from the looper thread spool from inside and between the tension discs, through the take-up eyelet, around the under side of spool to the tension wire, eyelet, towards the immediate below tension. Pass the threading wire, point first, immediately below tension. Pass the threading wire, point first, immediately below tension.

To Thread the Looper for Machine 35-2

The thread should pass from the looper thread spool from inside and between the tension discs, through the take-up eyelet, around the under side of spool to the tension wire, eyelet, towards the immediate below tension. Pass the threading wire, point first, immediately below tension.
Use Guide 8083 and follow the instructions for using Guide.

**To Sew Mougnete**

Keep both the selvedges even on top.
Adjust the plier to the depth of the seam.
Tighten the plier rod to top of the needle lever.

Put Guide 7984 and adjust it so that it will make a seam. 

**To Sew Moguette and Axminster**

**To Sew Light Brussels and Tapestry**

As the Guide 7983 is made in two sections it can be adjusted to the different selvedges and a good seam always made.

**To Sew Brussels**

Use Guide 7983.

**To Sew Hemp Carpet**

Heavily on the carpet, particularly on cheap linoleum, hold the machine up a little so that it will not bear too deep on each side of the carpet about half an inch from the edge.

Put Guide 7983 and put a strip of canvas about three inches.

**To Sew Inset**

CARPET GUIDES

FOR USING

INSTRUCTIONS

8
To Hem Borders

1. Guide 7986. Hook the border up and rub the edge down with the screwdriver.

To Sew on Heavy Borders

1. Guide 7983. Keep the turned-down side a little higher than the border.
2. Sew about one inch by hand at all angles before suspending the carpet.
3. A few stay stitches should be put in by hand at each cross seam.

Each machine is a list of accessories regularly sent out with the machine, which you receive:

- Needles, 25 or 26
- Matching Awl and Hook 8044
- 2 Loopers Threaders 8033
- Eye 8043
- 10 Hanger Chain Scissors
- 1 Hanger Chain Scissors 8044
- 10 Hanger Chain Scissors 4442
- 4 Guides
- Spring 7979
- 1 Prong Wheel Presser
